

Troubleshoot Chat GPT

7 Common Challenges

1. Off topic - Narrow your prompt and specify exactly what you want to discuss
2. Misunderstood prompts - Try rephrasing it with different wording or more specific language
3. Repeating or wording off track - Expand your scope of conversation or ask follow up questions to get it back on track
4. Unfinished thoughts - Robot may have reached its character response. Just ask it to continue to keep going. It may have thought it had fully answered the question. You may need follow-up questions to get a more detailed response and to keep it talking
5. Over-imaginative replies - If something doesn't seem right, call out your robot. "Did you just make that up?" Ground your prompt in more concrete terms or ask for factual answers.
6. Generic Responses - Give your robot more context and be more specific with your prompt.
7. Ignoring instructions - Double check to make sure you were clear. Sometimes you just need to take a break or start an entirely new chat. Don't waste time fighting.
